## Software Engineer - Web Applications

Website: [vikeshcodes.in](http://vikeshcodes.in) GitHub: [github.com/vikeshcodes](https://github.com/vikeshcodes)

Open to freelance, projects, and opportunities

### Summary

Software engineer focused on scalable web applications, backend systems, and real-world digital products. Builds production-minded systems with clear frontend structure, API-backed logic, and deployment paths that remain easy to understand and maintain.

### Skills

<b>Frontend</b>	HTML, CSS, JavaScript, responsive UI, SEO structure, accessibility basics
<b>Backend</b>	Node.js, Express, REST APIs, MongoDB schemas, validation, content pipelines
<b>DevOps</b>	Docker, Nginx, Compose workflows, deployment-ready repository structure
<b>Tools</b>	GitHub workflows, debugging, technical writing, product framing

### Selected Projects

#### Vikesh Codes Platform

**Problem:** Needed one platform that could support freelance enquiries and recruiter evaluation at the same time.

**Solution:** Built a universal brand site with homepage, work, services, blog, resume, and hire funnel.

**Result:** One product surface now supports client conversion and career positioning together.

#### Resume and Job Opportunity Tracker

**Problem:** Opportunity tracking usually lives outside the portfolio and loses technical context.

**Solution:** Added a recruiter-friendly resume page plus backend job tracking with POST and GET job endpoints.

**Result:** Hiring activity can be tracked through the same product system.

#### Client Acquisition Funnel

**Problem:** Generic contact pages create weak lead quality and slow follow-up.

**Solution:** Built a detailed service funnel with CRM-ready fields and a thank-you page.

**Result:** Enquiries are structured enough for useful follow-up from the first message.

### Education

Independent software engineering track developed through shipping web products, backend systems, and practical system design work.
